# ECO PLUS™

## Simple Operation

- Wastewater from the washers is pumped to our lint removal vibration system for removal of all large solids in the process water
- A centrifugal pump sends the filtered water through our pressure filters, removing the suspended solids, oil and grease, soaps, and organics, and other contaminants and sending the recycled water to a recycled water tank. Then another supply pump sends high volume flow of recycled water to the washing machines as both hot and cold water supply to the washers
- UV and Ozone Disinfection System provide a dual assault on bacteria and viruses before the recycled water goes back into the washing process. The AquaRecycle® AquaSmart™ system monitors water quality and chemistry to insure only the best quality water comes back to the laundry operation.
