

# ECOPLUS™

From the leaders in laundry water recycling comes a Warm Water Only recycling system that balances proper washing chemicals with 100% water recycling using Advanced Oxidation Process (A.O.P.)

- EcoPlus™ recycles ALL the laundry wash water and reuses for all wash and rinse cycles. There is a final cold water rinse just like our award winning recycling systems.
- EcoPlus™ technology is a Hybrid system that is patented and the most effective and safe use in the market today. We use high concentrations of A.O.P. for additional disinfection.
- EcoPlus™ can be injected directly into the wash wheel AND into the water for a double dose of disinfectant for the best results in the marketplace. EcoPlus™ means using cold and warm water combined in addition to injection of A.O.P. for laundry washing for our three levels of disinfection.
- Sized for washing capacity for highest efficiency and maximum savings

# ECOPLUS™

## SIMPLE OPERATION

- Wastewater from the washing machines is first pumped to our lint removal vibration system for removal of all large solids from the process water.
- A process pump sends the filtered water through our patented series of polishing filters, clarifying the water and removing Oil and Grease, Soaps and Organics and other contaminants before filling a large storage tank. A second pump in the system supplies the recycled water at a very high volume flow to the washing machines via both the hot and cold water lines to ensure rapid washing machine fill times.
- The recycled water is pumped thru our Advanced Oxidation Process (A.O.P) where high concentrations of natural oxidizers are injected into the recycled water for complete disinfection in warm and cold water before entering the washing machines.
